9. Briefly describe the waste management practices adopted in your establishments. Describe the strategy adopted by your company to reduce usage of hazardous and toxic chemicals in your products and processes and the practices adopted to manage such wastes.

Non-toxic waste water from process, canteen, amenities, cooling towers, boiler blow-down, etc. is treated in Effluent Treatment Plant (ETP). ETP is equipped with primary, secondary, tertiary treatment followed by an RO system. Tertiary treated effluent is either recycled through RO or discharged to the common effluent system.

The Aqueous effluent generated from processes having low Chemical Oxygen Demand (COD) and high Total Dissolved Solvents (TDS) is fed to the Multiple Effect Evaporator and condensate of the evaporator is sent for treatment in the Effluent treatment plant or recycled/reused.

The sludge generated from the evaporator/ETP is sent to an authorised secured landfill site. High calorific and high TDS value hazardous waste is sent for processing to authorised co-processors and further to cement industry.

Spent acids are sent for recycling to authorised end user to make useful products. Aqueous/Organic waste is sent to the authorised common incinerator system.

As per our policy, we have discontinued production of the highly toxic red triangle products as per the Insecticides Act.. Thus, the product portfolio and waste generated remains relatively less toxic.
